

Rolamentos flangeados em resistente latão naval

TUBO DE POPA ANTERIOR

PILOTO MACHO PARA ENCAIXE COM A CAIXA DE GAXETA

Os rolamentos flangeados para tubo de popa anterior Johnson Cutless® são de latão naval centrifugamente moldado e dispõem de uma camada de metal pesada e um flange integral. O composto de borracha nitrílica especialmente formulada está seguramente ligado ao revestimento de metal e é resistente a produtos químicos e óleo. O flange integral permite a sólida fixação por parafusos do rolamento à caixa de gaxeta do tubo de popa. O piloto macho no flange integral coincide com o encaixe fêmea da caixa de gaxeta. Os flanges são fornecidos SEM FUIROS a menos que especificado diferentemente. Consulte a página 18 para "Diagramas de perfuração". Para estilos divididos ou escalonados, consulte as páginas 14-17.

PRECAUÇÃO:

Quando for necessário encaixar o rolamento, a refrigeração deve ser obtida por arrefecimento gradual sem ultrapassar os -28 °C (20 °F) usando gelo regular ou do congelador (NÃO GELO SECO). OBSERVAÇÃO: Bater ou chocar o rolamento, enquanto estiver no estado frio pode causar a separação da borracha do revestimento.

Rolamentos aprovados: Os rolamentos flangeados em latão naval Johnson Cutless® atendem à especificação militar MIL-DTL-17901C (SH) Classe II de modelo totalmente moldado e são homologados pelo American Bureau of Shipping.
